AS PSYCHOLOGY

Paper 2 Psychology in context

Monday 22 May 2023

Afternoon

Time allowed: 1 hour 30 minutes

Materials

For this paper you may use:

a calculator.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 72.
- You will be assessed on your ability to:
 - use good English
 - organise information clearly
 - use specialist vocabulary where appropriate.

Time allowed. I Hour SU

Research Methods Answer all questions in this section. A psychologist investigated whether productivity levels are affected by the amount of sleep a person gets. They asked 30 participants to sleep for 4 hours on the first night and then stay awake all of the next day (Day 1). The same participants were then asked to sleep for 8 hours on the second night and stay awake all of the next day (Day 2). Each participant was then asked to rate their productivity at the end of Day 2 as 'more than', or 'less than', or 'the same as' Day 1. Outline what is meant by an aim. Write a suitable aim for this study. [2 marks] The results of the study are given in Table 1 below: Table 1 Number of participants giving each productivity rating at the end of Day 2 More productivity Less productivity Same productivity Number of 21 6 3	Answer all questions in this section. 1 0	The psychologist analysed the results of the study using the sign test.	Do not write outside the box
	Explain two reasons why it was appropriate to use the sign test in this situation. Refer to the description of the study in your answer. [4 marks]	
	1	
	2	
111	Use the data in Table 1 to calculate the value of S using the sign test. Explain how you calculated this figure. [3 marks]	
	Turn over for the next question	

	As a result of the sign test calculation the psychologist concluded that participants assessed themselves as more productive after eight hours' sleep than after four hours' sleep. Other previous research has also shown that having more sleep has a positive effect on problem-solving skills.	Do not write outside the box
	In a follow-up study, the psychologist designed an experiment to investigate further the effect of sleep duration on problem solving. They randomly selected 20 students from a local university. There were two conditions:	
	Condition 1 – the students were invited to a university sleep laboratory and were allowed to sleep for six hours. Fifteen minutes after waking, each student was timed to see how long it took them to solve 10 simple mathematical problems, correctly.	
	Condition 2 – the same 20 students were invited back to the sleep laboratory a week later. This time they were allowed to sleep for two hours. Fifteen minutes after waking, each student was again timed to see how long it took them to solve a different set of 10 simple mathematical problems, correctly.	
12	Briefly explain how the psychologist would carry out a pilot study in this case. [2 marks]	
13	Should the hypothesis for the follow-up study be directional or non-directional? Explain your answer. [2 marks]	

1 4	Write a suitable experimental hypothesis for the follow-up study. [3 marks]	Do not write outside the box
1 5	Identify one extraneous variable that could have affected the results of the follow-up study.	
	Suggest why it would have been important to control this extraneous variable and how the psychologist could have controlled it. [3 marks]	
	Turn over for the next question
